

# HITO 1 – LENGUAJE DE MARCAS

**ALBERTO GUERRA** 

## **APARTADO 1**

### **Documento HTML**

Esta es la estructura del documento html donde daremos forma a la calculadora en si

```
<html lang="en">
   <div class="container">
       <div class="calculator">
         <div class="calculator_keys">
           <button class="key--operator" data-action="subtract">-</button>
           <button class="key--operator" data-action="multiply">&times;
           <button class="key--operator" data-action="divide">÷</button>
           <button>7</button>
           <button>8</button>
           <button>9</button>
           <button>4</button>
           <button>5</button>
           <button>6</button>
           <button>1</button>
           <button>2</button>
           <button>3</button>
           <button>0</button>
           <button data-action="decimal">.</button>
           <button data-action="clear">AC</button>
           <button class="key--equal" data-action="calculate">=</button>
         </div>
       </div>
      </div>
     <script src="H13T.js"></script>
```

### **Documento JSON**

```
cument.addEventListener('DOMContentLoaded', function()
